

WQ Workshops

March 2007

The National Action Plan for Salinity and Water Quality

Applying Water Quality SIP resources to develop local water quality guidelines

In this one day workshop participants will learn how to apply computer-based tools to analyse and interpret water quality data against a range of guidelines. This will enable users to establish the technical basis for developing local water quality guidelines and calculating event-based loads.

The workshop will cover: 1) the context for setting guidelines 2) the basics of the reference, impact and proportional approaches for developing guidelines and targets; 3) loads calculation methods; and 4) the application of computer-based tools using these approaches.

Location	Date
DPI centre, 25 Yeppoon Road North Rockhampton	March 16th 2007 8:45am - 4pm

For information on workshop registration and content please contact Bob Packett, your Regional Water Quality Officer on 07 4938 4242.
